

## **How to Report for Prevent Blindness Ohio (PBO) Screeners and Frequently Asked Questions.**

### **1. Who needs to report?**

This year, PBO screeners must report individually.

### **2. How long will it take to complete the report?**

It will take about five minutes to enter only screener information. Reporting both screener information and school screening data will take approximately 20 to 30 minutes.

### **3. What is the school's role?**

Schools must complete the annual vision survey. Screeners and schools should work together to avoid sending the same information twice.

### **4. What if I received free screening equipment?**

You should screen at least 10 children each year and report this data. This helps us track how the equipment is being used.

### **5. What demographic questions should I answer?**

All respondents must answer questions one to four.

### **6. How do I answer question five?**

If you are reporting school screening data, answer "yes." If you are reporting only for Prevent Blindness and someone else is entering the school screening data, answer "no."

### **7. Do all screeners need to complete the survey?**

Yes, each screener conducting vision screenings with equipment they received from the PBO training must complete a survey.

### **8. What if someone else is reporting the school screening data?**

Even if you're not responsible for reporting, please complete the survey.

### **9. What if I am responsible for reporting school screening data?**

If you are responsible for reporting, you must complete the entire survey.
